
Matched deformation and computational cost
RMS difference at $N = 13$: 0.72 mm
(a) Four-point, $N = 13$
$\varepsilon_{\text{edge}} = 1.400e-02$
(b) Diagonal, $N = 13$
$\varepsilon_{\text{edge}} = 1.399e-02$
y [m]
x [m]
(c) Constraint-system size
Four-point
Diagonal
Number of shear equations
Vertices per side N
(d) Measured computational cost
Shear-projection time [ms/frame]
